

TJI® Joists with a Side Flange Notch in the Top (Compression) Flange

The flange of a TJI® joist should never be deliberately cut or notched and TJI® joists subject to damage prior to installation should be discarded and replaced. However, it is recognized that an inadvertent notch to the flange of a TJI® joist may occur during the construction process, after the member has been installed. This technical bulletin provides contingency guidelines for TJI® joists with one (1) inadvertent Side Flange Notch in the top (compression) flange.

Definitions

- Side Flange Notch** – notch type that encompasses the full flange depth and up to half the flange width

TJI® JOIST FLANGE MATERIAL & DIMENSIONS

TJI® Series	Flange	b_f	d_f
TJI® 110	LVL	1 $\frac{3}{4}$ "	1 $\frac{1}{4}$ " - 1 $\frac{3}{8}$ "
TJI® 210	LVL	2 $\frac{1}{16}$ "	1 $\frac{1}{4}$ " - 1 $\frac{3}{8}$ "
TJI® 230	LVL	2 $\frac{5}{16}$ "	1 $\frac{1}{4}$ " - 1 $\frac{3}{8}$ "
TJI® 360	LVL	2 $\frac{5}{16}$ "	1 $\frac{3}{8}$ "
TJI® 560	LVL	3 $\frac{1}{2}$ "	1 $\frac{3}{8}$ "

Figure 1: Diagram of an inadvertent Side Flange Notch in top (compression) flange of a TJI® joist.

Conditions and Limitations

- Span tables are valid for flange notch contingency only.
- Original, undamaged TJI® joists are properly designed.
- Adjacent TJI® joists on both sides remain undamaged.
- Uniform distributed loads only.
- One (1) inadvertent Side Flange Notch per TJI® joist (single-ply joist members only).
- Side Flange Notch permitted in location zones of top (compression) flange (see Figure 4 and Figure 5).
- Notch depth (d_N) ≤ half the flange width (b_f).
- Length (parallel to span) of Side Flange Notch ≤ 4".
- Centerline of Side Flange Notch ≥ 6" from nearest edge of rectangular or slotted holes.
- Side Flange Notch due to saw-cuts or drilling only.
 - Excludes flange damage due to rough handling, drops, forklift stabs, etc.
- Joist member slope ≤ 0.25/12.

Should your situation conflict with any of the conditions and limitations, please consider an alternative option:

- "Header-Off" the damaged TJI® joist around the location of the notch.
 - Reference Weyerhaeuser Engineered Wood Products Header-Off Span Table ([TB-319](#)).
- Remove/replace the damaged TJI® joist or install an additional matched, undamaged TJI® joist within 3" on-center of the damaged member.
 - For joists spaced at 24" on-center (or greater), a matched, undamaged TJI® joist may be required on each side of the damaged member due to sheathing span limits.
 - Reference TJI® Joists Specifier's Guide ([TJ-4000](#)) or ForteWEB® software to verify the allowable span when installing an additional simple span member beside a damaged continuous span member.
- Contact your Weyerhaeuser representative for detailed notch analysis.

Should you have any questions, or your situation does not meet the conditions and limitations, please contact your Weyerhaeuser representative.

Approved Nailed-Repair Assemblies

The layout of the span tables in this technical bulletin is similar to the span tables found in *TJI® Joists Specifier's Guide (TJ-4000)*. The primary difference is an additional column included under each joist spacing. The "No Repair" column provides the maximum joist span without an approved nailed-repair assembly installed on the damaged TJI® joist. The "Repair" column provides the maximum joist span with one of the approved nailed-repair assemblies installed on the damaged TJI® joist. Figure 2 provides construction details for the approved Panel Repair. Figure 3 provides construction details for the approved 2x4 Repair. Either repair assembly may be installed along the side of a TJI® joist, centered on the location of the Side Flange Notch.

PANEL NAILED-REPAIR COMPONENTS^{[1][2]}

TJI® Series	Web Backer Thickness	Panel Product & Nail Size	
		23/32" OSB or 23/32" Plywood Panel	1 1/8" TJI® Rim Board or 1 1/4" TimberStrand® LSL
TJI® 110	5/8" or 3/4"	8d (0.113" x 2 1/2")	8d (0.113" x 2 1/2")
TJI® 210	3/4" or 7/8"	8d (0.113" x 2 1/2")	8d (0.113" x 2 1/2")
TJI® 230 / TJI® 360	7/8" or 1" (net)	8d (0.113" x 2 1/2")	10d (0.128" x 3")
TJI® 560	1 1/2" (2x_)	FLANGE: 8d (0.113" x 2 1/2") WEB: 10d (0.128" x 3")	FLANGE: 10d (0.128" x 3") WEB: 16d (0.162" x 3 1/2")

[1] Apply construction adhesive at all contact surfaces.

[2] Repair assembly may be installed on either side of joist.

Figure 2: Detail of Panel Repair for TJI® joists with an inadvertent Side Flange Notch in top (compression) flange.

2x4 NAILED-REPAIR COMPONENTS^{[1][2]}

TJI® Series	Web Backer Thickness	2x4 Species & Nail Size	
		TimberStrand® LSL or DF-L Standard or SPF No. 2	
TJI® 110	5/8" or 3/4"	10d (0.128" x 3")	
TJI® 210	3/4" or 7/8"	10d (0.128" x 3")	
TJI® 230 / TJI® 360	7/8" or 1" (net)	10d (0.128" x 3")	
TJI® 560	1 1/2" (2x_)	FLANGE: 10d (0.128" x 3") WEB: 16d (0.162" x 3 1/2")	

[1] Apply construction adhesive at all contact surfaces.

[2] Repair assembly may be installed on either side of joist.

Figure 3: Detail of 2x4 Repair for TJI® joists with an inadvertent Side Flange Notch in top (compression) flange.

TJI® Joists with a Side Flange Notch Located between End Bearing and Quarter-Span

INDEX OF FLOOR SPAN TABLES

TJI® Series	Joist Depths	Page
TJI® 110	9½", 11⅞", 14", 16"	4
TJI® 210	9½", 11⅞", 14", 16"	4
TJI® 230	9½", 11⅞", 14", 16"	5
TJI® 360	11⅞", 14", 16", 18", 20"	5
TJI® 560	11⅞", 14", 16", 18", 20"	6

Location Zones (End Bearing to Quarter-Span)

= Location Zone for Side Flange Notch between End Bearing and Quarter-Span

Figure 4: Location zones for a Side Flange Notch in simple and continuous TJI® joists (end bearing to quarter-span).

How to Use These Tables

1. Confirm the damaged TJI® joist complies with Conditions and Limitations on page 1.
 - Tables assume that the original, undamaged TJI® joist was properly designed as per [TJ-4000](#) or [ForteWEB®](#) software.
2. Determine the distance of the inadvertent Side Flange Notch from inside face of nearest support relative to the as-built span length (ℓ_i).
 - See Figure 4 above.
3. Select the appropriate table per the location of the Side Flange Notch and the TJI® joist series.
4. Identify the design live load and dead load.
5. Look up the maximum allowable span for the notch location, joist depth, notch depth (d_N), design loads, joist spacing, and repair option.
6. Compare the table span to the as-built span length (ℓ_i).
 - If the table span is less than the as-built span length (ℓ_i), consider one of the alternative options listed on page 1.

General Table Notes

- Tables are based on:
 - Uniform loads.
 - More restrictive of simple or continuous span.
 - Clear distance between supports.
 - Minimum bearing length of 1¾" end (no web stiffeners) and 3½" intermediate (no web stiffeners).
- Assumed composite action with a single layer of 24" on-center span-rated, glue-nailed floor panels for deflection only.
 - Deflection criteria = L/480 live load (LL); L/240 total load (TL).
- For continuous spans, ratio of short span to long span should be 0.4 or greater to prevent uplift.

Floor Span Tables – Side Flange Notch Located between End Bearing and Quarter-Span

[1] Confirm accordance with Conditions and Limitations on Page 1 and reference Figure 4, How to Use These Tables, and General Table Notes on Page 3.

[2] Table applicable to TJI® joists with one (1) inadvertent Side Flange Notch located between nearest end bearing and quarter-point of the joist clear span.

[3] Span value considers design load of 40 PSF Live Load / 25 PSF Dead Load.

TJI® Joists with a Side Flange Notch Located between Quarter-Span and Mid-Span

INDEX OF FLOOR SPAN TABLES

TJI® Series	Joist Depths	Page
TJI® 110	9½", 11⅞", 14", 16"	8
TJI® 210	9½", 11⅞", 14", 16"	8
TJI® 230	9½", 11⅞", 14", 16"	9
TJI® 360	11⅞", 14", 16", 18", 20"	9
TJI® 560	11⅞", 14", 16", 18", 20"	10

Location Zones (Quarter-Span to Mid-Span)

= Location Zone for Side Flange Notch between Quarter-Span and Mid-Span

Figure 5: Location zones for a Side Flange Notch in simple and continuous TJI® joists (quarter-span to mid-span).

How to Use These Tables

1. Confirm the damaged TJI® joist complies with Conditions and Limitations on page 1.
 - Tables assume that the original, undamaged TJI® joist was properly designed as per [TJ-4000](#) or [ForteWEB®](#) software.
2. Determine the distance of the inadvertent Side Flange Notch from inside face of nearest support, relative to the as-built span length (ℓ_i).
 - See Figure 5 above.
3. Select the appropriate table per the location of the Side Flange Notch and the TJI® joist series.
4. Identify the design live load and dead load.
5. Look up the maximum allowable span for the notch location, joist depth, notch depth (d_N), design loads, joist spacing, and repair option.
6. Compare the table span to the as-built span length (ℓ_i).
 - If the table span is less than the as-built span length (ℓ_i), consider one of the alternative options listed on page 1.

General Table Notes

- Tables are based on:
 - Uniform loads.
 - More restrictive of simple or continuous span.
 - Clear distance between supports.
 - Minimum bearing length of 1¾" end (no web stiffeners) and 3½" intermediate (no web stiffeners).
- Assumed composite action with a single layer of 24" on-center span-rated, glue-nailed floor panels for deflection only.
 - Deflection criteria = L/480 live load (LL); L/240 total load (TL).
- For continuous spans, ratio of short span to long span should be 0.4 or greater to prevent uplift.

Floor Span Tables – Side Flange Notch Located between Quarter-Span and Mid-Span

TJI® 110 - MAXIMUM JOIST SPAN WITH SIDE FLANGE NOTCH IN TOP FLANGE (QUARTER-SPAN TO MID-SPAN)^{[1][2]}
